

# Halton DFB

## Conical Ceiling Diffuser

- Horizontal air supply, suitable also for exhaust
- Installation flush to the ceiling, light-weight aluminium design
- Circular duct connection with rubber gasket
- All sizes available integrated in an aluminium panel for installation in modular 600x600 mm suspended ceiling
- Openable cone module enables cleaning of the diffuser and ductwork

### Accessories

- Airflow adjustment damper
- Plenum options with measurement and adjustment functions
- Measurement and adjustment module

### MATERIAL AND FINISHING

PART	MATERIAL	FINISHING	NOTE
Frame	Aluminium	Anodised Polyester-painted/ White RAL 9010/ 50% gloss	Epoxy-painted (100%) available
Central cone	Aluminium	Anodised Polyester-painted/ White RAL 9010/ 50% gloss	Epoxy-painted (100%) available
Plenum / spigot	Galvanised steel

LpA values presented with room attenuation 4 dB (red 10m<sup>2</sup> - sab). When using room attenuation 8 dB (red 25m<sup>2</sup> - sab): LpA - 4dB.

Pa Supply air cooling capacity, W  
 LpA A-weighted sound pressure level, reduced by total equivalent absorption surface of 10m<sup>2</sup>, dB(A) red 10m<sup>2</sup> - sab  
 ΔPst Static pressure drop, Pa

ΔPtot Total pressure drop, Pa  
 Ld Distance from the supply unit, at which air jet detaches from ceiling, m  
 Lmin Minimum distance between central lines of two supply units, m (V3 = 0,25m/s at 1.8m height)  
 L0.2 Isothermal throw length, m when residual velocity of supply air jet 0,2 m/s  
 Room temperature (Tr) = 24 °C  
 Supply air temperature (Ta) = 14 °C  
 Room height = 2,8 m

## ACCESSORIES

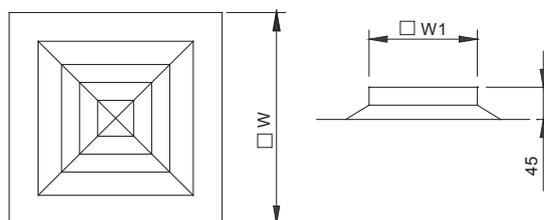

ACCESSORY	CODE	DESCRIPTION
Plenum	PH	Plenum for horizontal duct connection (without insulation)
Plenum	PI	Plenum for horizontal duct connection (mineral wool insulation on 4 sides)
Plenum	PR	Plenum for horizontal duct connection with airflow adjustment
Plenum	PV	Plenum for vertical duct connection (with or without insulation)
Airflow measurement and adjustment module	MSM	For supply installation
Sound attenuation	IN	Mineral wool in the plenum
Flow adjustment damper	OD	Aluminium opposite blade damper for flow adjustment

## Product Models

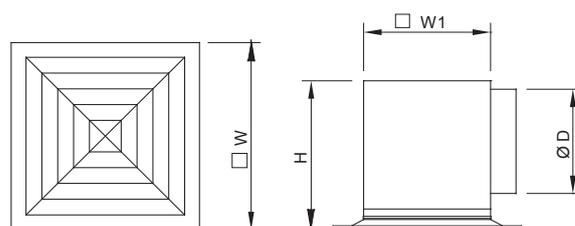

All standard sizes are available also with 1, 2 or 3 supply directions.

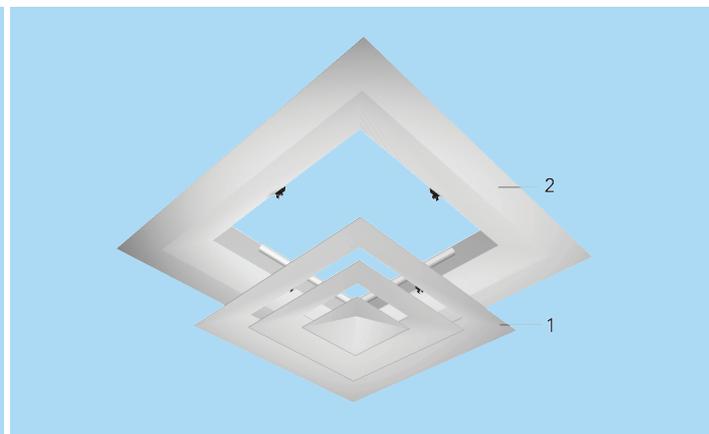

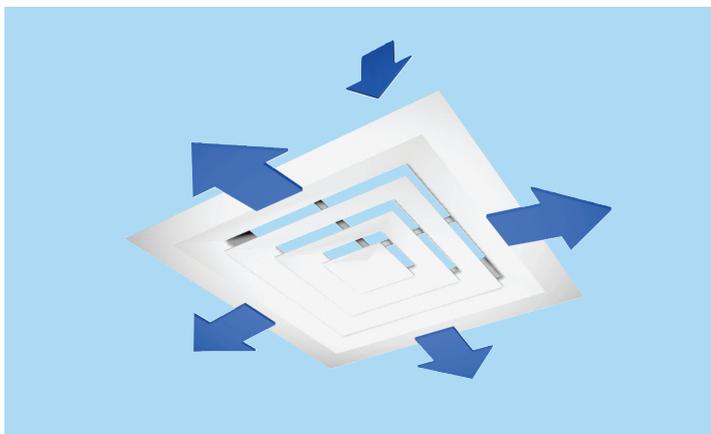

## DIMENSIONS

24x24	745	600	600	499

## Function

Air is supplied horizontally into the space through the slots in the conical front panel.

Supply air mixes with room air in the vicinity of the diffuser.

The fixed cones of the diffuser are designed to ensure that the supply air flows along the ceiling.

The DFB diffuser can also be used as an exhaust unit.

## Installation

### CODE DESCRIPTION

1	Supply air part
2	Frame

The diffuser is connected either directly to the duct or using plenum PH, PI, PR or PV.

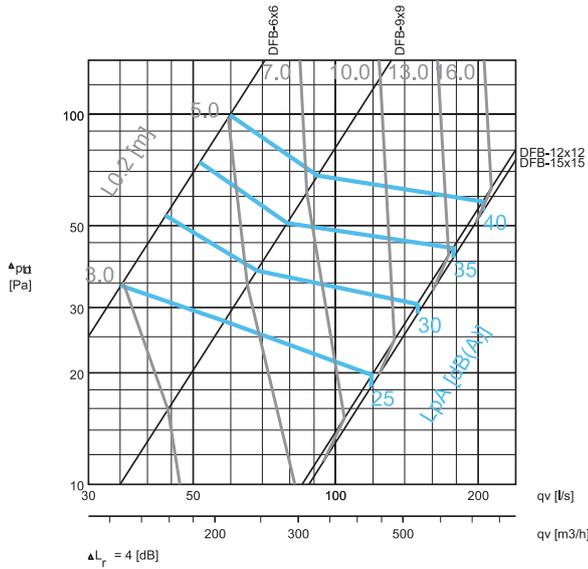

The DFB diffuser is fastened to the plenum with springs.

### Dimensions of installation hole

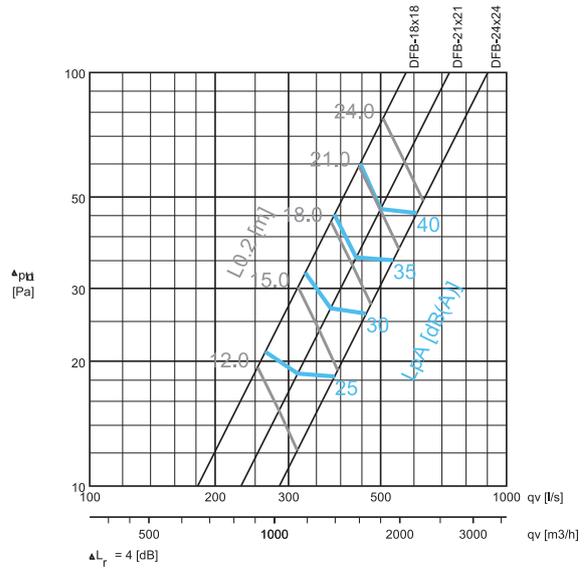

NS	H mm	L mm

LpA values presented with room attenuation 4 dB (red 10m² - sab). When using room attenuation 8 dB (red 25m² - sab): LpA - 4dB. NR/NC noise criteria

## Adjustment

The airflow rate can be adjusted and measured only when the diffuser is installed.

In order to enable airflow adjustment and measurement of airflow rate, it is recommended that the diffuser be connected to the plenum equipped with the MSM module.

The supply flow rate is adjusted by using the measurement and adjustment module MSM.

Detach the central cones (supply air part) and pass the tubes and control spindle through the diffuser. Measure the differential pressure with a manometer. The flow rate is calculated using the formula below.

$$q_v = k * \sqrt{\Delta p_m}$$

Adjust the airflow rate by rotating the control spindle until the desired setting is achieved.

Lock the damper position with a screw.

Replace the tubes and spindle into the plenum and reattach the central cone.

K-factor for installations with different safety distances (D= duct diameter)

### Airflow adjustment damper OD

The airflow rate is adjusted by turning the damper blades behind the grille with a screwdriver. The measurement is carried out when diffuser is installed.

PH	>6XD	min 3XD
100	6	7
125	10	12
160	19	22
200	28	32
250	49	51

## Servicing

Remove the central cones by gently drawing out the central part.

Clean the parts by wiping them with a damp cloth.

Push the central cones back into place so that the springs lock.

### Option: with balancing plenum PH + MSM

Remove the measurement and adjustment module by gently pulling the shaft (not the control spindle).

Wipe the parts with a damp cloth, instead of immersing in water.

Remount the measurement and adjustment module by pushing in the shaft until the module meets the stopper.

Push the central cones back into place so that the springs lock.

## Suggested Specifications

The diffuser shall be made of extruded aluminium, anodised or polyester-painted to white (RAL 9010) colour.

The bevel angles of the outer frame and central cone shall be welded so that the joints are almost invisible.

The diffuser shall be connected to the ductwork using a plenum with mineral wool as sound attenuation material.

The plenum shall be equipped with an airflow measurement and adjustment module.

The central cones of the diffuser shall be detachable to provide access to the measurement and adjustment module in the plenum.
