

Halton UTT – Multi-blade airflow management damper

Overview

- Shut-off and balancing damper for outdoor air intake and exhaust air with opposed blade design
- Damper blades comprise thermal insulation
- Tightness in closed position fulfills EN 1751 class 3 requirements
- Temperature operation range up to +100°C, optionally up to +200°C
- Galvanised steel design
- Classification of casing leakage EN 1751 class B

Product models and accessories

- Model with stainless steel /acid-proof steel (AISI 316L) design.
- Model with insulated casing
- Model with heat-proof design
- Circular duct connections
- Several actuator options

Dimensions and weight

Models with rectangular connections

W	H
100, 200, ..., 2400	100, 200, ..., 2400

Models with circular connections (D1 or D2)

ØD	WxH
100	150×150
125	150×150
160	200×200
200	200×200
250	250×250
315	300×300
400	400×400
500	500×500
630	600×600
710	800×800
800	800×800
1000	1000×1000
1250	1250X1250

Weight (kg)

Weight presented without actuator. Basic actuator weight about 1 kg.

Material

No.	Part	Material	Note
1	Casing	Galvanised steel	Acid proof steel (AISI 316L) also available
2	Blade bearings	Alloy of polyamide and molybdenum sulphide (plastic BM=ST).	Also available: Stainless steel (AISI 304) (BM=SS) Acid proof steel (AISI 316) (BM=AS) Bronze JN5 (BM=BR)
3	Blade gaskets	Silicone	Heat-proof model: LTE silicone
4	Blades	Galvanised steel	(sandwich design). Acid proof steel (AISI 316L) also available
5	Gasket inside the casing	Silicone	Only tight UTT and UTX dampers. Gasket fixed in an aluminium profile
6	Rectangular drive shaft (15x15mm)	Galvanised steel	In conjunction with standard plastic bearings (BM=ST) Acid proof steel (AISI 316) also available (BM=ST)
7	Round drive shaft (Ø15mm)	Acid proof steel	In conjunction with AISI 316 or bronze bearings (BM=AS/SS/BR)
8	Lever mechanism	Galvanised steel	Acid proof steel (AISI 316L) also available

Shaft types and dimensions

Depending on the choice of bearing material, the damper will be equipped with a round or square axle.

On Halton UTT/R dampers with standard bearings (BE=ST) , the damper will be equipped with a square 15×15 mm galvanised steel axle.

On heatproof design Halton UTT/R dampers, and on all dampers with AISI316/304 or bronze JN5 bearings (BM=AS, BM=SS or BM=BR) a round Ø15mm AISI 316 stainless steel axle will be used.

Accessories

The product models MD=I and MD=J have a double sheet casing with mineral wool insulation. The insulation thickness is 20 mm.

The Halton UTT damper is available equipped with either manual adjustment or actuator operation. The adjustment and control arrangement options are:

Adjustment and control options	Code	Note
Manual handle adjustment	MO = MA	
Manual extension bar adjustment	AC = BA	Handle extension arrangement
Actuator operation	MO=	See tables below

The damper actuator is selected from the list below according to the operating voltage, control arrangement and the required torque of the damper. The torque of the selected actuator can be higher than the required torque of the damper.

Standard actuator options

NM-models

Torque, damper size ... 10 Nm ($A < 1.2 \text{ m}^2$)
Manual override operation, mechanical position limit

Actuator type	Code MO	Control arrangement	Operating voltage	Power consumption
NM24A	C1	On-off, 3-point	AC/DC 24 V	3,5 VA
NM230A	C2	On-off, 3-point	AC 230 V	5,5 VA
NM24A-SR	C3	Control modulating DC 2...10 V, Position feedback 2...10 V	AC 24 V	4 VA

BFN-models

Torque, damper size ... 9 Nm ($A < 1.2 \text{ m}^2$)
Spring return, manual operation, position limit

Actuator type	Code MO	Control arrangement	Operating voltage	Power consumption
BFN24-HL	M1	On-off, 2 auxiliary switches	AC/DC 24 V	6 VA
BFN230-HL	M2	On-off, 2 auxiliary switches	AC 230 V	10 VA

BF-models

Torque, damper size ... 18 Nm / 12 Nm ($A < 2.5 \text{ m}^2$)
Spring return, manual operation, position limit

Actuator type	Code MO	Control arrangement	Operating voltage	Power consumption
BF24	E1	On-off, 2 auxiliary switches	AC/DC 24 V	10 VA
BF230	E3	On-off, 2 auxiliary switches	AC 230 V	12,5 VA
BF120	E7	On-off, 2 auxiliary switches	AC 120 V	12,5 VA

SF-models

Torque, damper size ... 20 Nm ($A < 4 \text{ m}^2$)

Spring return, manual operation, position limit

Actuator type	Code MO	Control arrangement	Operating voltage	Power consumption
SF24A	A6	On-off	AC/DC 24 V	7,5 VA
SF24A-S2	A7	On-off, 2 auxiliary switches	AC/DC 24 V	7,5 VA
SFA	A8	On-off	AC 24...240V / DC 24....125 V	18 VA
SFA-S2	A9	On-off, 2 auxiliary switches	AC 24...240V / DC 24....125 V	18 VA
SF24A-SR	A0	Control modulating DC 2...10 V, Position feedback 2...10 V	AC/DC 24 V	7 VA
SF24A-MP	A11	Control modulating, communicative 2...10 V, Position feedback 2...10 V variable	AC/DC 24 V	11 VA

SM-models

Torque, damper size ... 20 Nm ($A < 3.3 \text{ m}^2$)

Manual override operation, mechanical position limit

Actuator type	Code MO	Control arrangement	Operating voltage	Power consumption
SM24A	A1	On-off, 3-point	AC/DC 24 V	4 VA
SM24A-S	A2	On-off, 3-point, 1 auxiliary switch	AC/DC 24 V	4 VA
SM230A	A3	On-off, 3-point	AC 230 V	6 VA
SM230A-S	A4	On-off, 3-point, 1 auxiliary switch	AC 230 V	6 VA
SM24A-SR	A5	Control signal DC 0...10 V, Position feedback 2...10V	AC/DC 24 V	4 VA
SM24A-MA	M3	Control modulating 4...20 mA, Position feedback 2...10 V	AC/DC 24 V	6 VA

GM-models Torque, damper size ...40 Nm ($A < 6 \text{ m}^2$)
Manual override operation

Actuator type	Code MO	Control arrangement	Operating voltage	Power consumption
GM24A	G1	On-off, 3-point	AC/DC 24 V	6 VA
GM230A	G2	On-off, 3-point	AC 230 V	9 VA

Special actuators

Actuator type	Code MO	Control arrangement	Operating voltage	Power consumption
InMax-15-SF	M4	On-off, Spring return, 2 auxiliary switches	VAC/DC 24...240 V	–
NFA-S2 (10Nm)	M5	On-off, Spring return, 2 auxiliary switches	AC 24...240 V/DC 24...125 V	9,5 VA

Required torque for Halton UTT-damper actuator

Function

The Halton UTT dampers are used to shut off or control airflow in ductwork where tightness, thermal insulation and reliability are important. In the closed position the Halton UTT damper leakage class is 3 in accordance with the EN1751 standard.

In the open position the blades are turned in the direction of flow and do not cause significant

pressure losses.

Damper sizes conform with the international standards EN 1505, EN1506 and ISO 1707 for rectangular and circular ducts.

The maximum operation temperature of a standard damper is +100°C (for optional models +200°C).

Heat transmission of the damper is 6 W/(m² K).

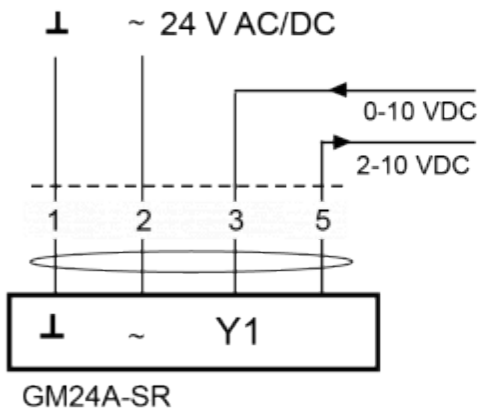

Installation

Install the damper in the ductwork with the blades in horizontal or vertical position. Fasten the damper in the ductwork using slip joints (SF=NA).

Optional models enable fastening the damper to duct flange by using bolts (SF=R2). Drill holes in the damper flange if necessary (options SF=L1 / SF=L2). Use a seal between the flanges in order to tighten the seam.

Fasten the models with circular connections by riveting or screwing.

Wiring:

Specification

The casing and blades are made from galvanised steel or stainless steel (EN 1.4404/AISI 316L).

The blade gaskets are made of silicon (or EPDM- rubber).

The drive shaft socket is made of galvanised steel with self-lubricating slide bearings.

The bearing is made from an alloy of polyamide and molybdenum sulphide (or stainless steel AISI 316 or stainless steel AISI 304 or bronze).

The damper is installed into rectangular ducts in compliance with EN 1751, or in circular ducts D=100 ...1250mm in accordance with EN 1751.

The damper meets the tightness requirements of EN 1751 class 3.

The casing of the damper meets the tightness requirements of EN 1751 class B.

Heat transmission of the damper does not exceed 6 W/(m²K).

The damper is suitable for either manual adjustment or actuator operation.
