

Private: Halton Vita OR Cell (VOC)

Overview

The Halton Vita OR Cell solution offers an easy and cost-effective way to upgrade the safety of your operating environment. The innovative, mobile HEPA air filtering units provide ultraclean air where it is needed. Two options are available:

- Halton Vita OR Cell Patient (in picture above)
- Halton Vita OR Cell Instrument

Operating principle

Halton Vita OR Cell is designed to complement existing ventilation system in spaces where improved clean air conditions for surgical procedures are required. It can also serve as the primary provider of clean air conditions in smaller outpatient and ambulatory treatment facilities.

Halton Vita OR Cell extracts air from the space, treats it with a pre-filter followed by a H14 HEPA filter and delivers it as a constant and stable laminar airflow directly to the wound area or the instrument table. This lowers the airborne contamination of the wound area and the instruments.

Halton Vita OR Cell units are easy to set up, re-adjust and move around. Both units have a simple user interface. Halton Vita OR Cell Instrument can be used with all common instrument tables.

All materials and the construction design enable easy cleaning of both unit and space. Financing models include purchasing or leasing with a maintenance plan.

Services

Halton Life Cycle

Halton offers leasing services for Halton Vita OR Cell Patient and Instrument, as well as annual maintenance agreements. Our maintenance services include performance validation and changing of spare parts, according to product-specific maintenance agreements. With our maintenance services, we offer extended warranties for all Halton Vita OR solutions.

For further information of our services, please contact sales.
